

**Interim Health Advisory  
About Eating Fish Caught  
In San Pablo Reservoir**

The California Office of Environmental Health Hazard Assessment reports that **elevated levels of mercury have been found in largemouth bass** caught in the San Pablo Reservoir.

Contra Costa Health Services advises fishers and others to **eat no more than one serving each month of largemouth bass** caught in San Pablo Reservoir.

Mercury is especially harmful to pregnant women and young children.

Some contaminants have also been found in *channel catfish*. Testing is continuing on them. **Fishers and others may want to restrict consumption of channel catfish to one serving each month.**

This advisory does not affect the water supplied from the San Pablo Reservoir for drinking. **The water supply is safe to drink.**

**For more information, call 925-370-5020**

This advisory is issued by Contra Costa Health Services, 597 Center Avenue, Martinez, CA 94553.

The Office of Environmental Health Hazard Assessment also advises restricting consumption of fish caught in San Pablo Bay and the Delta.
